FRONT SHOCKS FOR SNOWMOBILE

PART NO: UN 609, UN 610

A new product lineup of Snowmobile and ATV shock absorbers is about to emerge from the legendary Öhlins Racing, market leader in suspension technologies.

While testing and calibration is done we use our setting bank to store the information, this makes it also very easy for authorized Öhlins Centers to change the standard setting if the customer want to go on softer or harder side. Changing the spring pre-load is also easily done with the cam adjuster.

Shock length can be changed to suit several different snowmobile models and also special applications.

Using aluminum when building the shocks makes it as light as possible with blistering performance.

There are also a number of different springs available to suit your liking and ride style.

FEATURES

- > Fit most brands
- > 2 Base lengths 422mm/ 450mm
- > Easy to adjust spring preload
- > Different settings are available
- > We can build custom lengths
